### Ordering your lenses:

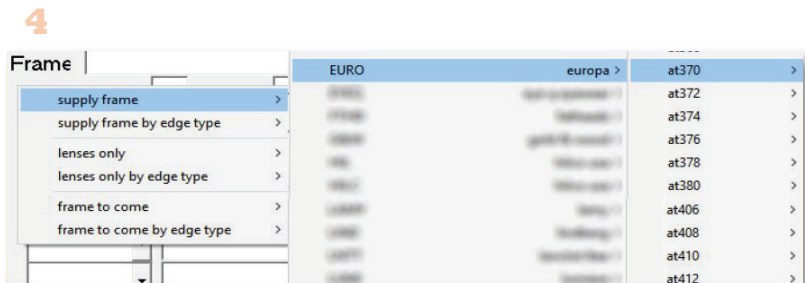

1. Select your lens style, material and colour
2. Add lens protective coating(s)
3. Input any services and description
4. Frame selection (Continued on reverse-side)

## Guide to ordering The Perfect Combo lenses in DVI Rx Wizard

### Add a Europa frame to your TPC order

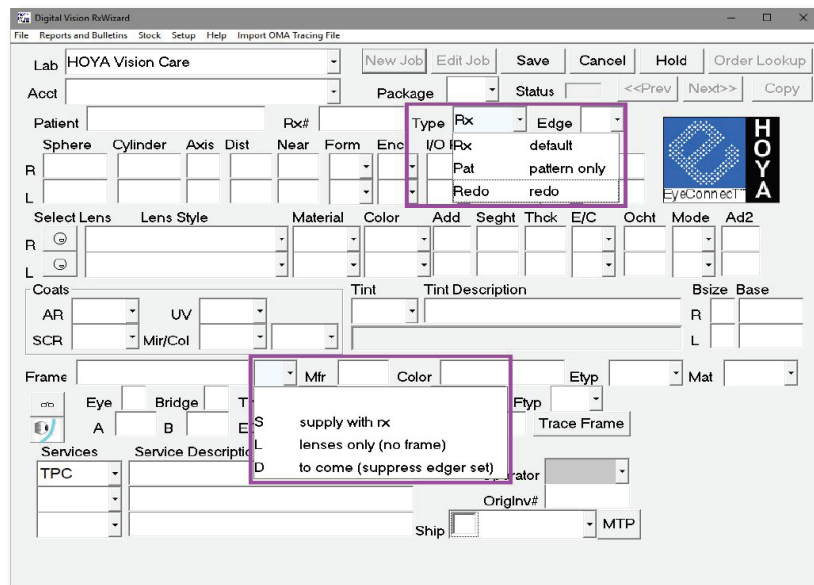

To add a Europa frame to your order, click the frame icon  to bring up the Frame selection menu. Select 'Supply Frame,' and from the list of vendors select 'EURO.' At the top of the list of frames, narrow down your search by selecting 'Collections.' Follow the menus to select your collection, model, size and colour.

### Lens 'Redo's

To redo a previous TPC order, click the drop-down menu Type and select 'Redo.' Enter the rest of the Rx, Lens and Frame information as you would normally. Once you've selected the frame, in the drop-down menu next to the frame information, select how you would like the remade lenses delivered to you:

- Select **lenses only** (no frame) if you would like edged lenses delivered to you from the lab, or
- Select **to come** (suppress edger set) if you would like to send the patient's frame to the lab to have the new lenses edged and inserted

Be sure to enter the original invoice number in the box labelled 'OrigInv#.' Enter the reason for the remake under Service Description. Examples of reasons for a redo:

- Doctor Rx change
- Seg. Height change
- Ordered wrong power
- Received off axis
- Progressive non-adapt
- Coating warranty
